EXTINGUISH YOUR FIRE ANT PROBLEM IN JUST 72 HOURS.

HOW TO SPOT A FIRE ANT INFESTATION:

Dome-shaped mounds they build in yards, pastures and gardens. However, they also nest under patios, around stumps and trees, beneath sidewalks, driveways, foundations and electrical boxes.

Fire ants reproduce in the spring and fall. The queen can produce 500,000 ants in a single colony.

7 YEARS IS THE LIFESPAN OF A QUEEN FIRE ANT

5 WEEKS IS THE LIFESPAN OF A WORKER ANT

THREE THINGS THAT ATTRACT FIRE ANTS:

Oily and greasy food

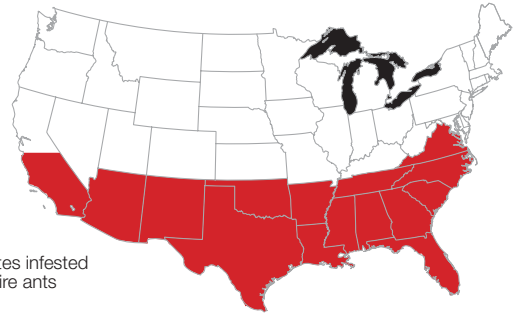

Pet food

Fire ant bait

343

MILLION ACRES ARE INFESTED WITH FIRE ANTS IN THE U.S.

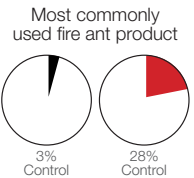

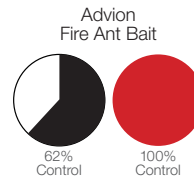

5 REASONS WHY WE CHOSE ADVION FIRE ANT BAIT:

1

FASTEST RESULTS AVAILABLE:

We use Advion® Fire Ant Bait and research shows that Advion controls foraging worker ants within 12 to 48 hours and delivers **total colony control within 72 hours**—allowing you to get back to enjoying your lawn without the threat of painful stings.

2

FIRE ANTS SEEK OUT OUR PRODUCT LIKE FOOD:

Our bait product is attractive to fire ants. They will actively seek it out and bring it back to the entire colony to eat (including the queen) for total colony control. The most common competitive product is a contact insecticide, which is only effective if ants come in contact with it.

3

REACHING THE LEVELS WITHIN A FIRE ANT MOUND:

When it's dry and hot, fire ants move deeper into the soil to find cooler temperatures and water. The most commonly used insecticide product does not effectively penetrate the soil. With Advion, ants will forage for it and bring it back down to the colony.

4

NO NEED TO WATER IN OUR PRODUCT:

Other commonly used insecticides need to be watered in to become effective. This step isn't necessary with Advion. In fact, it works best if no water is present.

5

BAITS ARE EFFECTIVE WITH LESS INSECTICIDE:

Our product has 18.4 times less active ingredient per acre than the most commonly used fire ant product.
